

Bitdefender®

Supreme protection against active threats for the SMB market

Why choose Bitdefender GravityZone?

The bundle of services that make up Bitdefender GravityZone is perfectly suited for small to medium businesses. It's completely managed within the cloud, meaning there's no cost to maintaining hardware, and it's able to catch advanced threats that other solutions might miss. It means you get peace of mind with a solution that can quickly stop infections, computer slowdowns and ransomware from invading the system network.

Anti-virus and anti-malware

Supreme protection against known and unknown threats to safeguard your systems against slowdowns and infections in real-time.

Web Filtering

Protect your employees by blocking access to potentially harmful websites in search results when browsing the web.

Dual-layered Firewall

Blocks access to hijack attempts and features intrusion detection to stop malicious software from entering your system

Data Protection

Prevents the loss of confidential data by setting filters that will block the transmission of sensitive information.

Remote and Local Quarantine Management

Quarantined items can be managed centrally from the cloud console by IT or stored locally in the system so you always have access to your historical data.

Simple Remote Deployment

Save time by remotely installing protection on all computers that are unprotected.

Dashboard Monitoring and Reporting

Gain access to on-demand or scheduled reports to monitor and control security activity with highly granular controls.

Security and Location-aware Policies

Enhance your company security by creating location-aware policies that adapt as your employees take their devices outside of work.

Protect, Control and Manage

It's easy to protect your device when you know how. That's why Bitdefender GravityZone takes a three-step approach to security. Its stringent anti-virus and anti-malware tools provide continuous process monitoring from its global threat intelligence network to protect your business system. You can control how the software deploys with simple remote deployment and restrict access to applications and websites in real-time. And finally you can manage all processes from a centralised point of contact, with access to audit logs and reports.

Only £1.75 + VAT per month per device
